

# Silence is aluminum.

The use of thermal rupture or double glazed frames, harnessing the existing, allows us to obtain excellent values of thermal and acoustic insulation currently certificated by the CE Label/Marking tests of the frames. The evolution in aluminium systems for architecture had positive repercussions in acoustic performance in houses, resulting in a high sound insulation level and increase the level of comfort in the buildings.

Knowledge is power and now that you know all this, use your this power and choose aluminium products. The world will thank you.

If you are looking for effective solutions in sound insulation listen to who understands about it.
